PERSONAL SKILLS

Web Design

Design Thinking

Front End Coding

Wireframe Creation

Problem-Solving

Computer Literacy

Project Management Tools

Strong Communication

PROGRAMMING JOURNEY

My journey into programming started at university, where I built a strong foundation in Python, C, and C++. These languages gave me the logical mindset and problem-solving skills needed to dive deeper into software development. Afterwards, I wanted to build real-world applications and step into modern web development. That's when I joined Programming Hero, where I learned the MERN stack (MongoDB, Express.js, React.js, Node.js). Through this, I gained hands-on experience in full-stack development—building responsive user interfaces, developing secure backend systems, and managing databases. Since then, I've worked on different projects, including web applications for blood donation services and food waste reduction platforms, which allowed me to combine my technical skills with meaningful causes. My journey is still ongoing—I'm constantly learning, improving, and building new things to become a better developer every day.
